

Global Chemical Management Policy

AVIENT CORPORATION AND SUBSIDIARIES

At Avient, we strive to conduct our business activities in a manner that is protective of health and the environment, while using a scientific and risk-based approach to chemical management.

Utilizing Responsible Care® Initiatives and Avient's Product Stewardship Policy, we conduct these protective activities for the chemicals we produce, purchase and sell. Given Avient's unique location in the supply chain, we coordinate with and inform appropriate stakeholders throughout the value chain in order to facilitate their journey of safe chemical management. This is accomplished by:

- Adhering to applicable global safety, health and environmental laws, regulations, and standards.
- Adhering to Avient's Responsible Care® pledge and Product Stewardship Policy.
- Following Avient's internal procedures for identifying, reducing, and managing hazardous materials and substances of very high concern (SVHC) in our products.
- Conducting risk assessments on hazardous products >1 ton for human health (CMRs) and environmental impacts (PBT, vPvB) associated with their intended use prior to placing on the market.
- Evaluating safer alternatives to substances of very high concern (SVHC) and striving to reduce or phase out these substances within our products.
- Ensuring all Avient associates have access to hazard information associated with their workplace chemicals.
- We expect our suppliers to be aligned with Avient's values of environmental stewardship and social responsibility. All suppliers are expected to comply with Avient's Supplier Code of Conduct.
- Protecting our associates, neighbors and the environment in the communities in which we operate, by understanding the health and environmental impact of our raw materials and products where they are manufactured or used.
- Conducting responsible trade activities that comply with global laws, regulations, treaties, trade agreements and legal sanctions.
